

Task

Build a Todo api for mobile apps. Backend only, no frontend required.

Requirements

- Users
 - register
 - login
 - multiple device login
 - reset password with email
- Todo lists
 - personal lists (one user owns list)
 - collaborative lists (multiple users own list)
- Todos
 - full CRUD
- notifications to multiple devices and users with changes whenever someone creates, deletes, or updates a todo item in a collaborative list
- Unit tests

Notes

- Use ExpressJS as Framework , and come up with best possible file structure as per your understandings.
- Use any unit testing library
- Use socket io real time events e.g; notifications
- Use Git for full commit history ,
- Commit messages should be meaningful
- Provide public repo url as submission
